

BRI 862 VC – Front Sleeve Seam Finish Pressing Machine

Overview

The BRI 862 VC is a professional front sleeve seam finish pressing machine designed for jackets, coats and high-quality tailored garments. With VC (Vertical Closing) technology and hanger-based pressing, it guarantees superior seam shaping, increased productivity and optimum operator comfort.

Key Advantages

- **VC – Vertical Closing System:** Provides unobstructed loading, clear garment visibility, no heat on the operator and integrated emergency stop for safe operation.
- **Vertical-closing head bucks:** Ensures even pressure across the full pressing surface, preventing garment displacement and improving finish quality.
- **Pressing on hanger:** Jacket remains on hanger during pressing, significantly reducing handling time and boosting productivity.
- **V-position form:** Allows easy garment loading and unloading.
- **5.7" colour touch display:** Easy-to-use control panel for precise programming and monitoring.
- **Maintenance-free distance control:** Contact-free sensing enables precise adjustment of buck distance to prevent shine and fabric marks on all materials.
- **Steam edge suction:** Removes steam from sensitive areas and protects previously pressed zones while creating a pleasant working environment.

Applications

Ideal for jacket manufacturers, tailoring units, uniform producers and high-end garment finishing lines requiring flawless sleeve seam finishing and consistent seam quality.
