

Gerber AccuMark — Integrated 2D/3D CAD for Fashion Patternmaking

Simplify design processes with 2D/3D patternmaking to deliver perfect fit, at the right time.

HERO IMAGE PLACEHOLDER (Upload your AccuMark hero/product image and I'll replace this.)

Gerber AccuMark is a fully integrated CAD suite taking you from concept to completion. It combines industry-leading 2D patternmaking, grading, and industrialization with production-ready 3D simulation, helping teams reduce physical samples, collaborate without data loss, and bring collections to market faster. With two releases per year, you benefit from continuous feature improvements while minimizing IT risk and downtime.

Key Figures & Subscription

- 2 releases per year (Spring & Autumn).
- Subscription commitment options: 1–3 years for flexibility.
- Latest available version: V 2024.2.

Gerber AccuMark Product Range

-  **Gerber AccuMark 2D:** Flagship 2D design, development, and grading used by leading brands worldwide.
-  **Gerber AccuMark 3D:** Direct connection between 2D patterns and 3D simulations for virtual, production-ready samples.
-  **Gerber AccuMark Made-to-Measure (MTM):** Advanced automation from pattern modification to complex order creation.

Features & Benefits

- **2D patternmaking & grading:** Create, edit, and grade patterns leveraging automation and powerful image tooling to maximize efficiency.
- **Industrialization tools:** Add notches, seam values, axes, and all manufacturing information for error-free production handoff.
- **3D virtual sampling:** Visualize construction and fit with a direct 2D↔3D link; reduce physical prototypes and accelerate approvals.
- **Data-safe collaboration:** Read partners' files reliably to prevent data loss and speed downstream processes.
- **Always current:** Two new releases each year keep features fresh and workflows optimized.
- **Operational continuity:** Reduce IT risks and access assistance 24/7 to avoid production disruption.
- **Team productivity & confidence:** Advanced, user-friendly tools that help deliver accurate, high-quality work faster.

2D/3D WORKFLOW IMAGE PLACEHOLDER

Add-ons & Options

- **AccuMark 2D:** Extended toolsets for drafting, editing, grading, and industrialization.
- **AccuMark 3D:** Real-time simulation environment to visualize drape/fit and fine-tune construction before cutting.
- **AccuMark MTM:** Personalization engine for made-to-measure workflows (pattern adjustments to complex order creation).

Product Specifications

Scope: End-to-end CAD—2D patternmaking, grading, industrialization, and 3D simulation/virtual sampling.

Release cadence: 2 upgrades/year (Spring & Autumn).

Licensing: Subscription (1–3-year terms) for commercial flexibility.

3D workflow: Direct 2D↔3D connection to visualize fit and construction; reduce physical sampling cycles.

Collaboration: Partner file compatibility to avoid data loss and accelerate development.

Support: 24/7 assistance to mitigate IT issues and prevent downtime.

Ecosystem: Works across the AccuMark suite; MTM module for personalized production.

Outcomes: Faster time-to-market, improved fit/quality, fewer errors, and lower sampling costs.
