

IIGM Separating Tissue Paper for Fabric Cutting & Spreading

Lightweight Interleaving Paper for Smooth Spreading and Efficient Vacuum Cutting

Product Overview

IIGM Separating Tissue Paper is a high-quality interleaving solution used in garment cutting rooms to separate fabric layers on cutting tables. It ensures smooth spreading, excellent airflow performance on vacuum cutters, and clear visual contrast between fabric lays for improved cutting accuracy.

Manufactured with consistent lightweight structure and evenly distributed thickness, the tissue paper enables quick and hassle-free fabric spreading while supporting strong vacuum efficiency. Contrasting tissue colours improve visibility between fabric lays, enhancing layer control and reducing errors during cutting preparation.

Key Features & Benefits

- Lightweight and evenly distributed tissue for smooth fabric spreading
- Improves airflow and vacuum efficiency on cutting tables
- Provides clear visual contrast between fabric layers
- Enhances productivity and reduces cutting preparation errors
- Available in high-yield grade and heavyweight grade options
- Suitable for a wide range of fabrics and cutting applications

Technical Highlights

Specification	Details
Application	Fabric layer separation in cutting rooms
Vacuum Cutter Compatibility	Excellent airflow performance
Grades Available	High-yield grade / Heavyweight grade
Colour Options	Contrasting colours for visual interleaving
Key Benefit	Smooth spreading and improved cutting accuracy
