TRAINING CENTRE

Training has always been an integral part of our corporate culture. In house training programmes, customized programmes for customers and individual training for young entrants to the industry are offered in all the main cities of India. IIGM training centers are well known for offering full time in-house programmes for machine maintenance, CAD, embroidery applications, productivity and quality areas, training of trainer programmes for skill development, and the evaluation of technical workforces in organizations. IIGM's training programmes have received accreditation from world renowned companies such as JUKI, GERBER, BARUDAN, EASTMAN, NGAI SHING and WILCOM.

The IIGM Apparel Training Centre has been in operation for the past 25 years, successfully training over 5000 students. Our courses are designed and dedicated to serve under privileged and nominally waged workers. Our offerings extend to provide services to garment factories that require technology assistance and training for their skill development centers. The Ministry of Skill development story has been successfully implemented through IIGM to promote skilled labor in the country.

IIGM state of the art infrastructure ensures that candidate is trained to the highest standards by our experienced and overseas trained faculty.

FACILITIES & INFRASTRUCTURE

Our training center equipped with modern equipment from established brands like Juki, Yamato, Gerber and Wilcom. Over 20,000 square feet of training rooms equipped with projectors and efficient software enhances the learning experience. Our courses are taught in multiple languages, depending upon the region and student's requirement. In addition to the 5 courses offered, students are evaluated technically through the training program, practically and theoretically. All course material is designed to simplify learning processes and be cost effective for the locals.

IIGM's training institute also provides seminars on subjects related to the garment industry from a foreign technician's perspective to induce international quality standards. Extra curricular activities include visiting various large scale garment factories; personality development, sports and generic entertainment are offered. The infrastructure also includes a 10,000 square feet hostel facility with in-house canteen and recreation facilities.

Successful students are issued with an authorized certification, which will allow them to grow in their personal careers in the garment industry world wide. IIGM has successfully placed 5000 students in various manufacturing facilities in the country and continues to do so.
