

IIGM i7-190 – 7 Inch iShark Industrial Plotter

The IIGM i7-190 iShark Plotter is a high-speed, high-precision industrial plotting system designed for seamless CAD pattern printing. Built for reliability and simplicity, it delivers superior plot quality, faster turnaround time, low maintenance, and full compatibility with all major apparel CAD software.

The IIGM i7-190 iShark Plotter provides exceptional accuracy and operational speed for apparel production environments. Designed with a 7-inch advanced print head, it ensures crisp detailing of graded patterns including seams, notches, grainlines, text, and technical annotations. Equipped with the tank-based iShark ink system, it offers continuous ink supply and reduced operating cost. The servo motor drive ensures smooth, precise movement with minimal noise, and the curved surface platform improves paper fit for perfect plot alignment. The system features automatic or manual one-key paper cutting, a double feeding system for plotter and pattern sheet, and independent double pressure wheels for quick switching between paper types. The iShark blade holder includes 12 adjustable levels and uses a Japanese diamond-grade blade lasting up to 4–8 times longer than standard blades. Backed by IIGM's superior iShark warranty and nationwide service support, the i7-190 provides maximum uptime, low maintenance, and precise industrial plotting for modern garment manufacturing.
