

## Yamato EZH-S1000 – Easy Open Sleeve Hemming Workstation

automation, including hem formation, sewing, thread trimming, and stacking

Differential top feeder allows iron-free flat finish, without roping, twisting or puckering.

Active thread control prevents tunnel seam, and achieves highly stretchable seam.

## Short Description

The Yamato EZH-S1000 is a semi-automatic workstation that automates open sleeve hemming processes, delivering high-speed production, consistent quality, and iron-free finishing with minimal operator skill.

## Long Description

The Yamato EZH-S1000 automates the complete open sleeve hemming process including hem formation, sewing, thread trimming, and stacking. Operators only need to place the fabric, making it ideal for deskilling operations and enabling fast training of new workers. The differential top feeder

ensures relaxed fabric feeding, delivering iron-free finishes without roping, twisting, or puckering. Active Thread Control prevents tunnel seams and ensures stretchable, high-quality seams suitable for knit fabrics. This workstation significantly improves productivity while maintaining consistent quality across all garments.
